

Test Cases

By: Jon Paul Dongieux, Sameer Rangoonwala, Pau Tuang, Gwangyeop Lee

1. The passwords generated should contain parameters that are required by the user and shouldn't contain parameters that aren't required.
2. There should be a minimum of one password generated, unless more is required from the user.
3. The passwords generated should show the password security strength by the password generated when outputted.
4. The user should be able to create an account and login to that account.
5. The user shouldn't be able to create an account with a username that already exists.
6. The user should be able to save passwords that they want to the password manager.
7. The user can delete passwords that they have saved in the password manager when viewing the password manager.
8. The user should be able to view the passwords they saved when they login to their account.
